MEDICAL_INSURANCE_COST_DATASET.CSV · 7500 ROWS

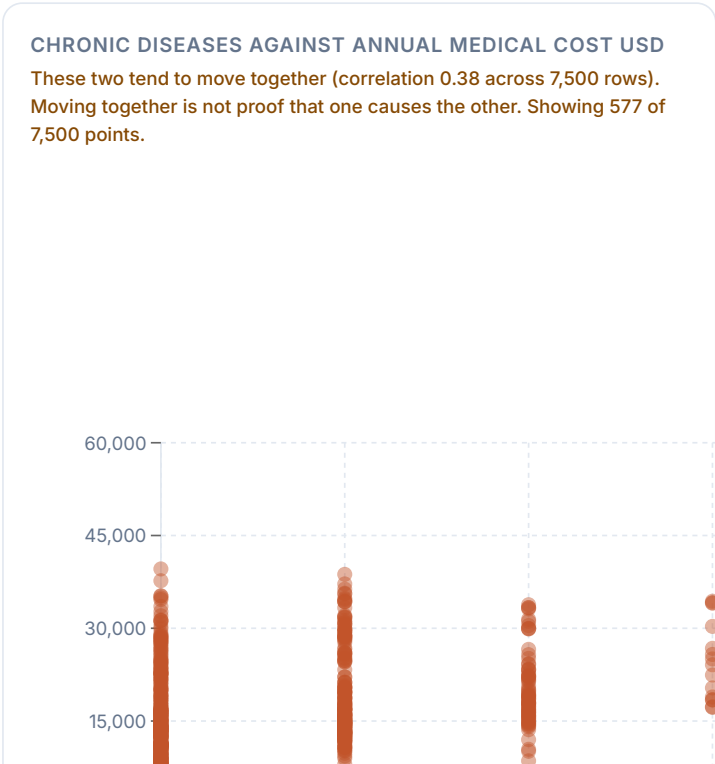

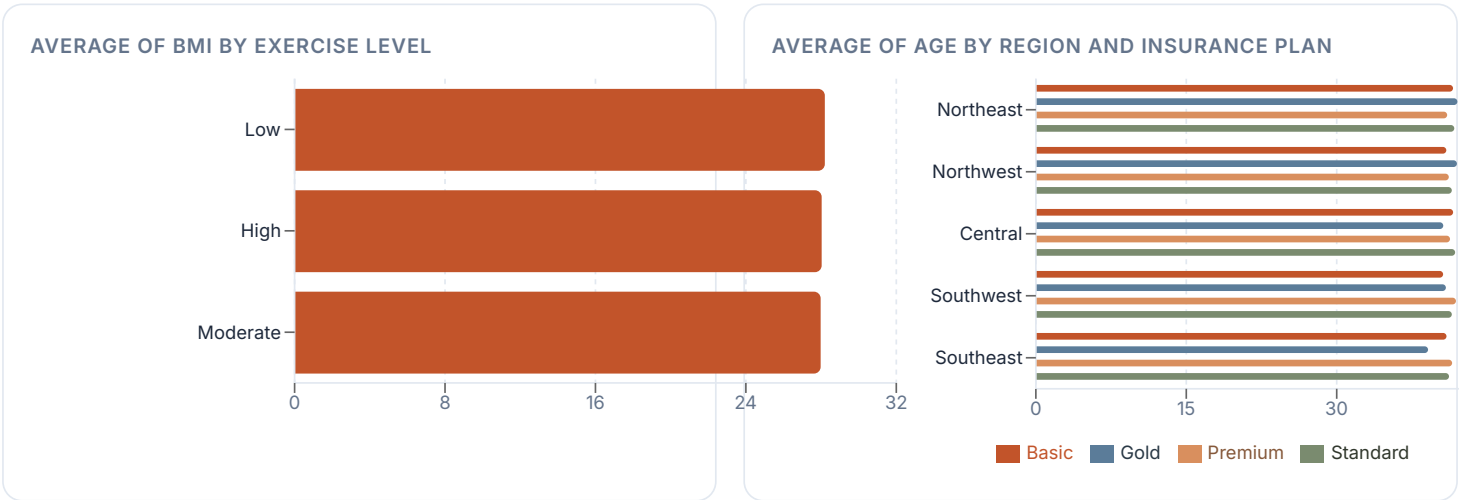

ROWS	COLUMNS	NUMERIC FIELDS	QUALITY SCORE
7,500	16	9	100

Nothing knocked this down

No blank-heavy or mixed-type columns, at least one measurable metric, and a workable number of rows and columns.

customer_id	age	gender	bmi	children	smoker	region	occupation	annual_income_usd	exercise
MIC100001	56	Male	25.2	2	Yes	Northeast	Driver	77885	Moderat

MIC100002	29	Male	25.7	1	Yes	Northwest	Doctor	18000	High
MIC100003	20	Male	30.1	1	No	Central	Teacher	85811	Low
MIC100004	59	Female	18.2	1	No	Northeast	Engineer	18000	Moderat
MIC100005	61	Male	31.2	5	Yes	Northwest	Nurse	42331	Moderat
MIC100006	59	Male	32.1	1	No	Central	Nurse	130838	Moderat
MIC100007	47	Female	26.3	0	No	Northwest	Lawyer	83769	Moderat
MIC100008	54	Female	29.7	1	No	Northeast	Doctor	52921	Low
MIC100009	19	Female	25.8	1	No	Southeast	Driver	62895	Moderat
MIC100010	65	Male	39	1	No	Northwest	Office Worker	84741	Low

Name any of these in your question to chart it: **gender** (2) · **smoker** (2) · **region** (5) · **occupation** (11) · **exercise_level** (3) · **insurance_plan** (4)

 7 columns show statistically unusual values (Bmi (up to 45), Children (up to 5), Annual Income Usd (up to 176,977), Chronic Diseases (up to 5), Doctor Visits Per Year (up to 15), Hospitalizations Last Year (up to 3), **+1 more**) — worth a look if any turn out to be a real business risk, not necessarily a problem with your data.

Decision Context

We need to cut annual medical cost per member by 8% this year. Rank smoking cessation, chronic-disease management and exercise programs by the saving each could deliver. Say which differences might be caused by age, BMI or plan mix, and what we cannot conclude from this data.

SITUATION

We need to reduce annual medical costs per member by **8%** this year. Our options to achieve this include smoking cessation, chronic-disease management, and exercise programs. Smoking cessation appears to offer the greatest potential for cost savings, followed by chronic-disease management and exercise, given the data on

income and medical costs associated with smoking status and chronic conditions.

WHAT THIS MEANS FOR YOU

Focusing on smoking cessation initiatives could significantly decrease medical expenses and help achieve the target reduction. Chronic-disease management could also bring substantial savings, particularly as it relates to managing frequent doctor visits and hospitalizations. While exercise programs are beneficial, they may offer lower immediate cost savings this quarter compared to the other interventions.

RECOMMENDED ACTIONS

MANDATE

Mandate the implementation of a comprehensive smoking cessation program within the current quarter.

APPROVE

Approve funding for enhanced chronic-disease management services targeted at high-cost conditions, effective this quarter.

RESTRICT

Restrict additional investment in exercise programs this quarter to prioritize smoking cessation and chronic-disease management initiatives.

⚠ RISKS IF YOU WAIT

⚠ We risk failing to achieve the **8%** reduction in annual medical costs, perpetuating financial pressures on our health plan members.

⚠ High costs associated with chronic diseases will likely continue, potentially resulting in increased premiums for plan members by year-end.
